DASA
Desarrollos Agroquímicos, S.A.

QUALITY AND ENVIRONMENTAL POLICY

Since 1941, **DASA** has specialized in the manufacture and marketing of fertilizers and other agronomic specialties. Our close collaboration with agricultural professionals and farmers has shaped our current expertise: plant nutrition and soil health.

At DASA, we continuously work to adapt to the evolving demands of new markets. Over recent years, we have focused our efforts on strengthening our position in the domestic market while expanding our presence in international markets.

Our mission is to improve crop performance by working closely with farmers, listening to their needs, and promoting sustainable agriculture that respects and protects the environment.

To achieve this, and to maintain and continually improve an Integrated Management System (IMS) based on the requirements of ISO 9001 and ISO 14001, **DASA** is committed to:

- Complying with customer requirements and expectations, applicable legal and regulatory requirements, other relevant stakeholder requirements, and any additional commitments assumed by the organization.
- Implementing measures to protect the environment, prevent pollution, reduce waste generation, control resource consumption, improve the efficient use of natural resources, contribute to climate change mitigation, and manage the environmental aspects over which we have influence.
- Promoting the efficient use of energy, water, and raw materials by implementing initiatives aimed at reducing our environmental impact.
- Encouraging the development and commercialization of more environmentally responsible products through the use of raw materials with a lower environmental impact, prioritizing environmentally friendly alternatives, and maintaining an organic fertilizer range certified by accredited control bodies.
- Training, informing, and raising awareness among all employees so that they understand these principles and actively apply them in their daily activities.
- Establishing Quality and Environmental Objectives on a regular basis, defining the necessary actions, responsibilities, deadlines, and resources required to achieve them, and monitoring their progress and effectiveness.
- Promoting innovation and the continual improvement of our products, processes, and Integrated Management System, considering monitoring and evaluation results and managing identified risks and opportunities.

This Quality and Environmental Policy is kept up to date, communicated to our employees and collaborators, and made available to all interested parties.
